COSC310 Team Crocodile - Client Questions

- Are the images sent through SMS *or* email and in what format?

- Does the project contain both the website and the app?

- What platforms does the app need to run on (if one is required)?

- How are the camera traps managed if they were to lose connection to the website/app?

- What kind of automated sorting of the images would be preferred? Location? Date?

- How would you like dropbear sightings to be categorized? Suburb? Street?

- How often should the website or app update? Hourly? Daily? As soon as a sighting is received from the camera trap?

- How should the website or app handle false positive sightings? Or is that already managed by the camera trap's machine learning algorithm?
